Working with Emergency Departments: Expanding Crisis Center Resources and Partnerships

Lifeline Crisis Center–Emergency Department Partnership Tool Kit
State/Tribal/Campus Suicide Prevention Grantee TA Meeting
January 6, 2009

Lifeline SOSA Initiative

- Survivors of suicide attempts (SOSAs) roundtable and in-depth interviews
- Outcome: Lifeline must take leadership role in reaching out to and engaging SOSAs
- Two projects underway:
  - Consumer: reaching out and engaging survivors (video, online)
  - Gatekeepers: reaching out and engaging emergency departments (tool kit, Webinars for crisis centers)
**Context: Trends in ED Treatment of Mental Disorders**

- 100 million ED visits in 2002.
- 20% increase in number of visits over prior decade.
- 15% decrease in number of EDs over prior decade.
- 6.3% of presentations were for mental health.
- 7% of these were for suicide attempts = 441,000 visits.

---

**Context: Trends in ED Treatment of Mental Disorders**

- Suicidal ideation (SI) common in ED patients who present for medical disorders.
- Study of 1,590 ED patients showed 11.6% with SI, 2% (n=31) with definite plans.
- 4 of those 31 attempted suicide within 45 days of ED presentation.

“Studies indicate that crisis hotlines play a critical role in the full array of available services provided by the mental health system. Crisis hotlines could also be utilized to provide monitoring or tracking of patients after hospital treatment for a suicide attempt. Crisis hotlines deserve the active support of the SMHA [State Mental Health Authority] to ensure high-quality, cost-effective services are consistently available to all residents of the State.”

**Conclusion 5:** Lapses in continuity of care, especially after discharge from emergency departments and inpatient psychiatry units, contribute to significant suicide-related morbidity and mortality.

**Recommendation 5.1:** The [State Mental Health Authority], in collaboration with the [State Health Authority], should initiate policies and practices that promote improved continuity of care for individuals at heightened risk for suicide following discharge from emergency departments for suicide attempts and inpatient psychiatric hospitalization.
Context: Forthcoming Lifeline Policy

“In order to enhance the safe, effective and seamless care of at-risk individuals receiving emergency services dispatched by Center Staff, Centers shall establish collaborative relationships (formal and/or informal) with one or more crisis or emergency service providers in the community.”

-- From Establishing and Maintaining Collaborative Relationships With Local Crisis and Emergency Services

Context: Behavioral Healthcare Article

BEHAVIORAL HEALTHCARE

Issue Date: June 2007

Preventing suicide minute by minute

Crisis call centers can be important partners with community-based resources

by JOHN DRAPER, PHD

“...Research has shown that utilizing call center services to provide follow-up care postdischarge from EDs has positive effects on people with mental health problems, including enhancing treatment linkages and reducing emotional distress and suicide attempts...Vaiva et al. demonstrated that at times patients were more open to telephone contact than an in-person appointment at a psychiatric clinic.”
ED Partnership Tool Kit for Crisis Centers

Tool Kit Resources

- **Case Studies**
  - Examples of effective Crisis Center–ED collaborations

- **Partnership Planning Exercises**
  - Assess your organization, develop partnership building strategies, prepare action plan.

- **Partnership Planning Materials**
  - Introductory letter, FAQs, talking points, and PowerPoint presentation

- **Sample Lifeline/SPRC Materials**
Case Studies

Case Study: Adams-Hanover Counseling Services

Activities:

- Partners with Hanover Hospital, York Memorial, and Gettysburg Hospital.
- ED calls crisis center whenever a client asks for mental health, drug, or alcohol services.
- Hanover Hospital is crisis center’s after-hours location.
Case Study: Adams-Hanover Counseling Services

Benefits:
- Improved safety for workers
- Strong relationships with ED doctors and hospital staff, which results in better client care
- Free training for the team
